

PURASTAT

A randomised feasibility study:
Endoscopically delivered Purastat to
treat bleeding caused by radiation proctopathy

**Do you have a diagnosis of radiation
proctopathy following pelvic radiotherapy?**

Do you suffer from significant rectal bleeding?

If you have answered yes to the above questions, you may be eligible to take part in a research project currently being run at Wythenshawe Hospital MFT and Liverpool Royal Hospital.

The project is looking into a new treatment for radiation proctopathy and comparing it to the current treatment available.

For more information about the study, please get in touch with the team below.
